

Cybertegetic offers affordable services in professional product photography, and photo retouching for websites, Amazon listings, and more. We have an online expert team of photographers and graphic specialists who are ready to receive your first batch of products for photography and editing.

Our goal is simple with CyberPhoto, you send your products to us including instructions, then we take high resolution photos in a professional studio with professional grade lighting and camera equipment. We then use photo editing softwares such as adobe photoshop, and adobe lightroom to edit your images carefully and accurately to your specifications. Our quality assurance team will then check whether the images are done perfectly or not. If you are looking for a long term partner in your photo editing, rotoscoping and vfx editing, CyberPhoto is the solution for you.
